

Proposal to amend claims 15 and 38 in 09/648,588 (10767-003001)

15 (twice amended). A system for stirring paint in an insertable can, comprising:

a can cover with a rotatable paint stirrer [that includes a rotatable drive shaft];

a can support shelf;

a stirring head positioned above the shelf that engages the stirrer when the can is inserted on the shelf, and

an interference arm extending from above the location of the can downwardly toward the shelf that mechanically interferes with the cover as a stop against rotation in a single direction to prevent rotation of the cover in the same direction of rotation of the stirrer [as the stirrer rotates];

the system being free of obstructions that would restrain insertion of the can or the cover to a single orientation on the shelf;

*of the cover after stirring the head can*

*gap between the shelf & the stirring head can*

*Cover being free to rotate*

*Cancelled*

38. (twice amended). A paint stirring head [body] that can be positioned above a paint can cover comprising [including]

a body,

a rotatable drive shaft connected to and extending downwardly from the body [comprising a downwardly extending],

an interference arm connected to and extending downwardly from the body and arranged to interfere with the can cover to prevent rotation of the cover as the drive shaft rotates.

*Remarks should point to col 1, l 30 of 4, 161 also to*

*for shaft clean most stirring head to*

*some provision with a least insertion & to the rack being free of obstructions in the claimed region*

*as well as argument over Dep. 51*

*Cancel 38-50 and amend 51*
